

JUNE

Mayor message

The Vergas wastewater discharge phosphorus level is at 4.2mg/l. The regulatory standard is 1mg/l. This high level can have a negative impact on the discharge to the wetlands and is costly to correct. One pound of phosphorus can generate 100 pounds of algae.

Some simple things we can all do to support reduction in phosphorus: use low or phosphorus free detergents and soap; keep food garbage out of the water, and wash your car on the lawn to prevent any phosphorus laden rinse from running into the storm water sewers.

Spring & summer is a time when we may try to sell items; as household, equipment, recreational, or vehicles. Remember when placing by streets to keep back and not place in the public right-of-way. This is for safety to avoid lack of visual obstruction or distraction. City ordinance General Regulations, Chapter 93, and Sign Ordinance 151.17.
